

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

PREVALENCE OF DISEASE.

No health department, State or local, can effectively prevent or control disease without knowledge of when, where, and under what conditions cases are occurring.

UNITED STATES.

CURRENT STATE SUMMARIES.

Telegraphic Reports for Week Ended Apr. 17, 1920.

These reports are preliminary, and the figures are subject to change when later returns are received by the State health officers.

PLAGUE.**California (Human Plague).**

What appears to be an isolated case of plague infection from ground squirrels has been reported from a rural locality in California. The patient was a girl, aged 7, living on an isolated ranch 10 miles southeast of Hayward, Calif. She died April 19, 1920, in Alameda County Hospital. Animal inoculations have been made and epidemiologic studies are in progress to verify the diagnosis.

Active plague suppressive measures have been carried on in California for several years. The work of eradication of ground squirrels has proceeded actively.

New Orleans, La. (Rodent Plague).

During the week ended April 15, 1920, five plague rats were confirmed at New Orleans, La. All were *Mus norvegicus*.
